**WHY ARE YOU KILLING MY MOM? "SEVERE ANEMIA & DRUG-INDUCED & SEPSIS DELIRIUM" & "DRUG INDUCED LYMPHEDEMA" IS ALL KILLING MY MOM & DESTROYING HER ONCE HEALTHY AND FUNCTIONAL BODY & BOWELS & BRAIN-**

**\*\*GET MY MOM ANTIBIOTICS!\*\***

THIAMINE-B1 DEFICIENCY & ZYPREXA FDA BLACK-BOXED DANGEROUS UNAPPROVED ANTIPSYCHOTIC CAUSING LYMPHEDEMA & FATALITY-Emailing Medications List Kapusta 10.30.2023.pdf

I STILL NEED ALL COBBDALE MEDICATIONS LISTS PLEASE FROM 6/6/23, JULY, AUGUST, SEPTEMBER, OCTOBER, NOVEMBER 2023...

**STOP ALL ANTIPSYCHOTICS!**  
**STOP ALL LAXATIVES & SUPPOSITORIES!**  
**STOP NORVASC**

## WHY IS MOM NOT TAKING B1?

**THIAMINE DEFICIENCY-** suggest that a lack of thiamin may cause oxidative stress or the **\*\*death of nerve cells\*\***, memory loss, formation of plaque, and reduced glucose metabolism, which are all risk factors for **\*\*Alzheimer's disease\*\***.-

<https://www.hsph.harvard.edu/nutritionsource/vitamin-b1/#:~:text=Animal%20studies%20suggest%20that%20a,risk%20factors%20for%20Alzheimer's%20disease.>

=====

[https://www.verywellmind.com/atypical-antipsychotics-379663#:~:text=All%20antipsychotics%20\(atypical%20and%20typical,\)%20and%20infections%20\(pneumonia\).](https://www.verywellmind.com/atypical-antipsychotics-379663#:~:text=All%20antipsychotics%20(atypical%20and%20typical,)%20and%20infections%20(pneumonia).)

## Do all antipsychotics have a black box warning?

**All antipsychotics (atypical and typical) carry a black box warning due to an **\*\*increased risk of death\*\*** in older adults with dementia-related psychosis. The increased mortality is mostly due to cardiovascular events (heart failure, sudden death) and infections (pneumonia).**Mar 3, 2021

=====

<https://www.drugwatch.com/fda/black-box-warnings/#:~:text=FDA%20black%20box%20warnings%20take,permanent%20or%20fatal%20side%20effects.>

## Why is it called a black box warning?

**FDA black box warnings take their name from the black border around the warning information. The information in**

**the box must have a header in all caps and information printed in bold typeface.**

**\*\*These warnings notify the public of \*serious, permanent or \*\*fatal side effects.\*\***

**=====**

<https://www.healthline.com/health/drugs/olanzapine-oral-tablet#:~:text=Olanzapine%20raises%20the%20risk%20of,seizures%3A%20Olanzapine%20can%20cause%20seizures.>

**For \*\*people with Alzheimer's disease: \*\*Olanzapine \*\*isn't approved to treat dementia-related psychosis or Alzheimer's disease.\*\***

**\*\*Olanzapine raises the risk of death in seniors (ages 65 years or older) with dementia-related psychosis. Most of these deaths are caused by heart problems such as heart failure, or infectious conditions such as pneumonia.\*\***

**Is olanzapine a \*\*high risk medication\*\*?**

**\*\*Olanzapine raises the risk of death in seniors (ages 65 years or older) with dementia-related psychosis.\*\* Most of these \*\*deaths are caused by heart problems such as heart failure\*\*, or infectious conditions such as pneumonia. For people with seizures: **\*\*Olanzapine can cause seizures\*\*****

**\*\*For people with diabetes or high sugar levels\*\*:  
Olanzapine can increase your blood sugar levels. Your doctor should check your blood sugar levels before and**

during treatment with this drug. They may need to adjust the dosage of any diabetes medications you take.

While you take this drug, watch for symptoms of **\*\*high blood sugar\*\***. These can include feeling very thirsty, needing to urinate often, having an increased appetite, or feeling weak. If you have these symptoms, check your fasting blood sugar level and call your doctor.

**\*\*For people with heart problems\*\***: Olanzapine can cause a sudden drop in blood pressure. If you have certain heart problems, talk with your doctor about whether this drug is safe for you. These problems include heart disease, a history of heart attack or stroke, heart failure, or problems with blood flow through the heart. They also include any conditions that may get worse if your blood pressure drops too low.

**\*\*For people with blood problems: Olanzapine can cause low levels of white blood cells, or neutrophils\*\***. These low levels **\*\*raise your risk of infections\*\***. If you have a history of blood problems or are on other drugs that can lower levels of these blood cells, your doctor should check your blood often during the first few months of treatment with this drug. They should also **\*\*monitor you for fever or any signs of infection\*\***. Your doctor might have to stop your treatment with olanzapine until your blood cell levels return to normal.

**\*\*For people with liver problems\*\*:** If you have liver problems or a history of liver disease, you may not be able to clear this drug from your body well. This may increase the levels of olanzapine in your body and cause more side effects. This drug can also **\*\*damage your liver\*\***.
